

It is a Thursday so Hilda, Albert and Elsie are having their weekly scooter race! Follow their equivalent fraction paths and find out who makes it to the finish without making a mistake. The others finish when they make an error. Can you put them in their finishing order at the bottom of the puzzle?

Hilda

$$\frac{3}{4} = \frac{9}{12} \quad \frac{1}{4} = \frac{4}{16} \quad \frac{3}{4} = \frac{15}{20} \quad \frac{1}{2} = \frac{6}{12} \quad \frac{1}{4} = \frac{4}{12} \quad \frac{1}{2} = \frac{7}{14}$$

Albert

$$\frac{1}{4} = \frac{5}{20} \quad \frac{3}{4} = \frac{12}{16} \quad \frac{3}{4} = \frac{21}{28} \quad \frac{1}{2} = \frac{4}{8} \quad \frac{1}{4} = \frac{10}{40} \quad \frac{1}{2} = \frac{3}{6} \quad \frac{3}{4} = \frac{18}{24}$$

Elsie

$$\frac{1}{2} = \frac{10}{20} \quad \frac{1}{4} = \frac{6}{24} \quad \frac{1}{2} = \frac{4}{8} \quad \frac{1}{2} = \frac{5}{15} \quad \frac{1}{4} = \frac{7}{28} \quad \frac{3}{4} = \frac{30}{40} \quad \frac{3}{4} = \frac{12}{16}$$
