

This is Mount Everest (Sagarmatha in Nepali and Chomolungma in Tibetan), the highest mountain in the world. Each year, hundreds of people try to climb it by working their way between the camps and steps until they finally reach the summit.

One expedition needs a bit of help! They have worked out the gaps between the various camps and steps but they have one too many! Can you convert the hours on the picture to days? They will all match a time in the grid to the right. When you have finished, one will be left. That is the incorrect answer.

11 days and $\frac{2}{3}$	14 days and $\frac{5}{6}$
16 days and $\frac{1}{4}$	12 days and $\frac{3}{8}$
13 days and $\frac{1}{6}$	18 days and $\frac{1}{6}$
15 days and $\frac{1}{8}$	18 days and $\frac{1}{3}$
